MPsrch_pp Run on: protein - protein database search, using Smith-Waterman algorithm Fri Mar 17 13:26:21 2000; MasPar time 39.48 Seconds 466.217 Million cell updates/sec

Tabular output not generated.

Description: Perfect Score: Title:

Sequence: >US-09-361-652-3 (1-777) from US09361652.pep 5838 1 RSCSFNEHGYHLFQAMRLGV.....NSTEHFQASIQDYTRRCGST 777

Scoring table: PAM 150 Gap 11

Searched: 188963 seqs, 23686106 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: a-geneseq36 1:geneseqp

Statistics: Mean 38.193; Variance 172.438; scale 0.221

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                           receptor 1 (BoPCaR 1).

The specification includes details of molecules that can modulate one or more inorganic ion receptor activities, and antibodies and antibody fragments targetted to inorganic ion receptor proteins. The proteins, nucleic acids and antibodies may be used to treat disorders by modulating one or more inorganic ion receptor activities, preferably disorders of calcium homeostasis, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Bovine parathyroid cell calcium receptor 1 (BoPCaR 1).

Claim 7; Fig 49; 174pp; English.
The tissue from which the human parathyroid calcium receptor and receptors from bovine parathyroid and rat kidney are derived, respond to changes, and control changes, in calcium ion concentration, e.g. parathyroid hormone regulattes Ca2+ homeostasis in blood and extracellular fluid, and kidney function alters through changes in Ca2+ levels in juxtaglomerular and proximal tubule cells in the kidney. The purified receptors (produced recombinantly) can be used to screen for compounds that modulate calcium receptor activity, especially those that can be used to treat diseases associated with the receptors in these tissues. They can also be used to raise antibodies for use in detection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Calcium receptor poly:peptide(s) -

                                           PT Screening for calcium receptor-active compounds - by recombinant PT Screening for calcium receptor and determining PT the effect of compounds on calcium receptor activity PS Claim; Fig. 49; 176pp; English.

CC A method has been developed of screening for a compound able to affect cone or more activities of a calcium receptor (CR) comprises: (A) CC contacting a recombinant cell with a test compound, where the cell comprises a recombinant nucleic acid expressing the CR, compound that the cell does not have functional CR expression from CC endogenous nucleic acid; (B) determining the ability of the test compound to affect one or more activities of the calcium receptor; and CC (C) comparing the ability with the ability of the test compound to affect the one or more CR activities in a cell not comprising the CR affect the one or more CR activities in a cell not comprising the CR affect the one or more CR activities in a cell not comprising the CR affect the one or more CR activities in a cell not comprising the CR affect the one will be present sequence represents human CC parathyroid CR, designated a pHuPCAR 4.0. The nucleic acid sequence of PHuPCAR 4.0 can be used as part of the recombinant nucleic acid in the CR disease or disorders characterised by abnormal calcium homeostasis, e.g. hyperparathyroidism, osteoporosis and other bone and mineral-related CC disorders associated with disrupted Ca2+ responses, e.g. seizures, cc stroke, spinal cord injury, hypoxia-induced nerve cell damage such as in CC cardiac arrest or meonatal distress, epilepsy, neurodegenerative and constructive disease and constructive disease and constructive disease. Huntinoton's disease and

                   DNA encoding calcium receptor polypeptide(s) - useful for therapeutic purposes, e.g. hyperparathyroidism and osteoporosis Claim 20; Columns 125-134; 174pp; English.

The present sequence is human parathyroid cell calcium receptor 4.0 (HupCaR 4.0).

The specification includes details of molecules that can modulate one or more inorganic ion receptor activities, and antibodies and antibody fragments targetted to inorganic ion receptor proteins. The proteins, nucleic acids and antibodies may be used to treat disorders by modulating one or more inorganic ion receptor activities, preferably disorders of calcium homeostasis, e.g.
                                                                                                                                                                                                                                                                                                                                        18-NOV-1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to polynuclectide sequences encoding mammalian pheromone receptor polypeptides. The polypeptides are expressed in murine and rat vomeronasal organ. The products can be used for modifying pheromone activity, e.g. for decreasing pheromone receptor mediated signal transduction. They can be used for controlling fertility and behaviour in vertebrates and invertebrates. Compositions comprising the polypeptides are particularly useful in e.g. controlling fertility in livestock and controlling reproduction in rodents or insects by interrupting the normal behaviours of rodents or insects that result in reproduction. The present sequence represents a rat kidney extraceliular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                calcium/polyvalent cation-sensing receptor.

Claim 8; Fig 50; 174pp; English.

The tissue from which the rat kidney calcium receptor and receptors from bovine parathyroid and rat kidney are derived, respond to changes, and control changes, in calcium ion concentration, e.g. parathyroid hormone regulates Ca2+ homeostasis in blood and extracellular fluid, and kidney function alters through changes in Ca2+ levels in juxtaglomerular and proximal tubule cells in the kidney. The purified receptors (produced receptor activity) can be used to screen for compounds that modulate calcium receptor activity, especially those that can be used to treat diseases associated with the receptors in these tissues. They can also be used to raise antibodies for use in detection assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                W54847;

provided that the cell does not have functional CR expression from cendogenous nucleic acid; (B) determining the ability of the test compound to affect one or more activities of the calcium receptor; and (C) comparing the ability with the ability of the test compound to affect the one or more CR activities in a cell not comprising the recombinant nucleic acid. The present sequence represents rat parathyroid CR, designated a pRakCaR 3A. The nucleic acid in the parathyroid CR, designated a practivities in a cell not comprising the parathyroid CR, designated a practice of the recombinant nucleic acid in the method described above. The compounds identified can be used to treat diseases or disorders characterised by abnormal calcium homeostasis, e.g. hyperparathyroidism, osteoporosis and other bone and mineral-related disorders. They can also be used for the treatment of diseases and cisorders associated with disrupted C21+ responses, e.g. seizures, stroke, spinal cord injury, hypoxia-induced nerve cell damage such as in cardiac arrest or neonatal distress, epilepsy, neurodegenerative diseases such as Alzhelmer's disease, Huntington's disease and any any approach to the compounds in the compounds described and any interest on any any approach as any any content of the compounds of t

                                                                                                                                                                                                                                                                                                                                                             The specification includes details of molecules that can modulate one or more inorganic ion receptor activities, and antibodies and antibody fragments targetted to inorganic ion receptor proteins. The proteins action activities and antibodies may be used to treat disorders by modulating one or more inorganic ion receptor activities, preferably disorders of calcium homeostasis, e.g. hyperparathyroidism and osteoporosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       В
            New isolated Aquatic polyvalent cation-sensing receptor - used to develop products for increasing or decreasing the salinity tolerance of fish for use in aquaculture claim 9; Fig 5A-B; 57pp; English.

This protein comprises dogifish shark kidney calcium receptor related protein (SKCaR-RP), an aquatic polyvalent cation-sensing receptor (PVCR). Its amino acid sequence was deduced from a kidney cDNA clone (see T89290). It shows 74% homology to rat kidney PCVR and bovine parathyroid PVCR and possesses general features that are homologous to PVCR proteins, including a large extracellular domain, 7 transmembrane domains and a cytoplasmic acceptance of the contraction of the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 W32059;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    the plasma membranes of aquatic species, especially on the apical membrane of epithelial cells of elasmobranch fish, particularly from cells found in the collecting duct or late distal tubule in the kidney, intestine, gill, rectal gland, gonad or brain; an antibody that specifically binds to a PVCR, and a method of screening for aquatic PVCR agonists and antagonists. Modulation of the expression of the aquatic PVCR activates or inhibits aquatic PVCR mediated ion transport and endocrine changes that permit fish to adapt to fresh or salt water. The method facilitates the aquaculture of marine fish and can provide for the development of marine fish that are easily adaptable to fresh water aquaculture.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DNA encoding calcium receptor polypeptide(s) - useful for therapeutic purposes, e.g. hyperparathyroidism and osteoporosis claim 20; columns 117-126; 174pp; English.

The present sequence is human parathyroid cell calcium receptor 5.2 (HuPCaR 5.2).

The specification includes details of molecules that can modulate one or more inorganic ion receptor activities, and antibodies and antibody fragments targetted to inorganic ion receptor proteins. The proteins, nucleic acids and antibodies may be used to treat disorders by modulating one or more inorganic ion receptor activities, preferably disorders of calcium homeostasis, e.g. sequence 1088 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Brown WPI;

Claim 6; Fig 48; 174pp; English.
Claim 6; Fig 48; 174pp; English.
The tissue from which the human parathyroid calcium receptor and receptors from bovine parathyroid and rat kidney are derived, respond to changes, and control changes, in calcium ion concentration, e.g. parathyroid hormone regulates Ca2+ homeostasis in blood and extracellular fluid, and kidney function alters through changes in Ca2+ levels in juxtaglomerular and proximal tubble cells in the kidney. The purified receptors (produced recombinantly) can be used to screen for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Brown 9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 hyperparathyroidism, osteoporosis and other bone and mineral-related disorders. They can also be used for the treatment of diseases and disorders associated with disrupted Ca2+ responses, e.g. seizures, stroke, spinal cord injury, hypoxia-induced nerve cell damage such as cardiac arrest or neonatal distress, epilepsy, neurodegenerative diseases such as Alzheimer's disease, Huntington's disease and Parkinson's disease, dementia, muscle tension, depression, and anxiety Sequence 1088 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    endogenous nucleic acid; (B) determining the ability of the test compound to affect one or more activities of the calcium receptor; and (C) comparing the ability with the ability of the test compound to affect the one or more CR activities in a cell not comprising the recombinant nucleic acid. The present sequence represents human parathyroid CR, designated a pHuPCAR 5.2. The nucleic acid sequence of PHuPCAR 5.2 can be used as part of the recombinant nucleic acid in the method described above. The compounds identified can be used to treat diseases or disorders characterised by abnormal calcium homeostasis, e
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Screening for calcium receptor-active compounds - by recombinant expression of nucleic acid encoding calcium receptor and determining the effect of compounds on calcium receptor activity (laim 1; Fig 48; 176pp; English.

A method has been developed of screening for a compound able to affect one or more activities of a calcium receptor (CR) comprises: (A) contacting a recombinant cell with a test compound, where the recombinant cell comprises a recombinant nucleic acid expressing the provided that the cell does not have functional CR expression from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Balandrin MF, Brown El
